

ASSIGNMENT DAY 3

Day 3(1): Create a comparison table using the main difference between DDR3, DDR4, & DDR5 RAM, including speed, voltage, & typical use cases.

Feature	DDR3	DDR4	DDR5
Speed	Slowest: 800 to 2133 MT/s	Medium: 2133 to 2000 MT/s	Fastest: 4800 to 8400 + MT/s
Voltage	Highest: 1.5V	Lower: 1.2V	Lowest: 1.1V
Maximum capacity	upto 8GB per stick	upto 32GB ps.	Upto 128GB ps.
Typical use cases	older pcs, budget office, office desktop system.	Most standard home / office PCs, mid-range gaming.	High-end game, heavy video.

Day 3(2): Open your laptop or desktop, locate the RAM slots, & take a clear photo of the installed RAM module. Reinstall the RAM module & verify that your system boots successfully.

Day 3(3): List three key differences between HDD, SSD & NVMe storage types, & for each, name one app or use case that would benefit most from that storage type.

Feature	HDD	SSD	NVMe
Speed & latency	slowest: 80-160 MB/s	Fast: 500-550 MB/s	Blazing Fast: 3500 - 7000+ MB/s
Value proposition	lowest cost per GB.	Best price-to-performance	Maximum price-to-performance

Day 4(4): Remove the storage drive (HDD or SSD) from your system, take a photo of the connector type (SATA, M.2 or NVMe) & reinstall the drive. Confirm that your device recognizes the storage after assembly.
